ELYSIAN How to Order • Bay Form

- When ordering a bay, a bay measuring form must be completed in addition to a quote and order form.
- Before going into production, all bays are mathematically checked. If it is found that the measurements are out of Bradley's tolerances, the measurements will need to be rechecked. accurate measurements are critical to having a perfect fitting bay.
- Standard bays are shown; more complex bays are also available. In some instances, a template will be required. Templates are always required on continuous curves that are not a perfect curve.

Forms for Angle Measurements & Continuous Curves are available to download
www.bradleycollection.com/support/quote-order-forms/

Shown is a filled in example of a bay measuring form.

- Directions for measuring a bay** Read the directions. if there are any questions concerning the correct way to take wall measurements, please contact us.
- Collection & Diameter** Select the collection Select the type of bay and fill in the measurements.
- Details** Specify the finial location, and if the pole is a ceiling mounted or a double pole.
- Order Declaration** Sign and date the form. Bay orders will not be accepted without these items complete.

DIAMETERS

ELYSIAN

Diameters

Poles are cut, bent and curved to suit individual requirements.
When calculating the length of your pole, remember to allow tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece 4.0m (157")*.
Poles exceeding the recommended maximum distance between brackets, will be cut into equal parts unless otherwise specified. Pole joiners will be supplied. Mid or passing brackets should be placed at every join.

Pole diameter's - Ø30mm (1 3/16") • 50mm (2")

The overall pole cost is rounded up in 300mm (1ft) increments.

Diameter	Recommended maximum distance between brackets	Recommended curtain type for pole diameter	Minimum bend radius
Ø30mm (1 3/16")	2100mm (83")	Medium weight, lined & interlined curtains	Ø254mm (10")
Ø50mm (2")	2400mm (96")	Heavy weight interlined curtains	Ø254mm (10")

*Lengths over 2.4m (96") will incur a handling charge

POLES

Providing pole lengths

Pole lengths can be specified in two ways.
Option A is our preferred method. This covers Pole length only. **Option B** combines pole and finial lengths.

Poles are cut, bent and curved to suit individual requirements.
When calculating the length of your pole, remember to allow tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece 2.4 (94").
Poles exceeding the recommended maximum distance between brackets, will be cut into equal parts unless otherwise specified. Pole joiners will be supplied. Mid or passing brackets should be placed at every join.

Pole diameter's - Ø30mm (1 3⁄16") • 50mm (2")

The overall pole cost is rounded up in 300mm (1ft) increments.

Diameter	Recommended maximum distance between brackets	Recommended curtain type for pole diameter	Minimum bend radius
Ø30mm (1 3⁄16")	2100mm (83")	Medium weight, lined & interlined curtains	R254mm (10")
Ø50mm (2")	2400mm (96")	Heavy weight interlined curtains	R254mm (10")

Joining Poles

Where ever there is a join in the pole, this must always be supported by a bracket.

Bespoke Bays

Bradley's bespoke service allows poles to be specifically made for unique bay windows and complex long span installations. Poles can be shaped to create a system that follows contours. Passing rings have been designed to traverse over brackets and around bends. Using a double pole system in a bay window can create an elegant as well as practical treatment.

BRACKETS

Bradley offers a wide selection of brackets to fit most installations. The main categories are side, mid, ceiling, double and recess brackets. If the standard brackets will no work, custom brackets are available.

Side Brackets

are available in both single pole and double pole configurations. they are usually mounted towards the ends of poles for greater support. they have a vertical back plate that allows for the greatest fixing area.

Mid Brackets

Are used in the mid points of the system. A bracket is always required when poles are being joined. Every join requires a mid bracket. Mid brackets have a smaller horizontal back plate that provide support while also allowing clearance for window elements like moulding.

Passing Brackets

Like mid brackets are used in the mid points of the system and when used with passing rings allow the curtains to traverse the brackets. A bracket is always required when poles are being joined. A passing bracket is required at ever join. Passing bracket have a smaller horizontal back plate that provide support while also allowing clearance for window elements like moulding.

Recess Brackets

Fit at the end of pole when an installation goes wall to wall. Recess brackets are also commonly called 'inside mount'.

Custom Brackets

Are available, ranging from simple projection changes. To completely a original design. Due to our in-house design and manufacturing capabilities, we can do customs in volumes as little as 1 unit. All special projection brackets are charged at twice the cost of their standard projection equivalent. Brackets over 200mm (8") projection or that require a change to their backplate or an uplift/downlift of pole centre also attract special design charge per design drawing. Most custom brackets can be delivered within a 4 week lead-time. Please contact us for any custom bracket requests.

Projection

Is a the distance from the back of the wall to the center of the pole. This measurement roughly donates the distance from the wall that the curtain will drop. It is important when calculating wall clearance.

Fixing Plate Size

Is the size of the back plate when mounted on the wall. It is used to compute any possible clearance issues.

Passing brackets and passing rings allow drapes to traverse around bays and multi-pole systems. passing is available on single pole systems. Passing will only work if the system is correctly installed and the drapes are properly made and attached to the rings.

Passing do's & don'ts

1. Do make sure the top of the drapery ends underneath the main ring and does not touch or go above the bottom of the ring.
2. Always have the drapery hook perpendicular to the ringlet. Ringlets should not be sewn into a pinch pleat.
3. Be sure to have very little to no puddle on drapery, especially if the fabric is stiff. A stiff header can also cause the rings to not move freely.
4. If using lightweight or sheer fabric, the fabric needs to be weighted enough to pull the rings into the correct passing position.
5. Passing rings are not recommended with draw rods.
