# GLIDERPOLE® How to Order • Bay Form

- When ordering a bay, a bay measuring form must be completed in addition to a quote and order form.
- Before going into production, all bays are mathematically checked. If it is found that the measurements are out of Bradley's tolerances, the measurements will need to be rechecked. accurate measurements are critical to having a perfect fitting bay.
- Standard bays are shown; more complex bays are also available. In some instances, a template will be required. Templates are always required on continuous curves that are not a perfect curve.

Forms for Angle Measurements & Continuous Curves are available to download  
[www.bradleycollection.com/support/quote-order-forms/](http://www.bradleycollection.com/support/quote-order-forms/)

Shown is a filled in example of a bay measuring form.

- Directions for measuring a bay** Read the directions, if there are any questions concerning the correct way to take wall measurements, please contact us.
- Collection & Diameter** Select the collection Select the type of bay and fill in the measurements.
- Details** Specify the finial location, and if the pole is a ceiling mounted or a double pole.
- Order Declaration** Sign and date the form. Bay orders will not be accepted without these items complete.

# DIAMETERS

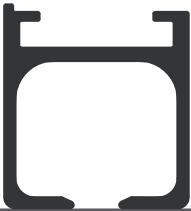

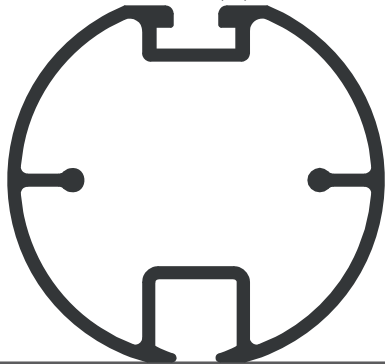

# GLIDERPOLE® Diameters

Poles are cut, bent and curved to suit individual requirements.  
When calculating the length of your pole, remember to allow tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece 3.0m (118")\*.  
Poles exceeding the recommended maximum distance between brackets, will be cut into equal parts unless otherwise specified. Pole joiners will be supplied. Mid or passing brackets should be placed at every join.

- Square pole dimension - H27mm (1 1/16")
- Flat pole dimension - H36mm (1 7/16")
- Round pole diameters - Ø30mm (1 1/16") • 50mm (2")

The overall gliderpole cost is rounded up in 300mm (1ft) increments.

# BRACKETS

# GLIDERPOLE<sup>®</sup> Brackets

---

Bradley offers a wide selection of brackets to fit most installations. the main categories are side, mid, ceiling, double and recess brackets. If the standard brackets will not work, custom brackets are available.

## **Side Brackets**

Are available in both single pole and double pole configurations. They are usually mounted towards the ends of pole for greater support. They have a vertical back plate that allows for the greatest fixing area.

## **Mid Brackets**

Are used in the mid points of the system. A bracket is always required when poles are being joined. Every join requires a mid bracket. Mid brackets have a smaller horizontal back plate that provides support while also allowing clearance for window elements like moulding.

## **Recess Brackets**

Fit at the end of pole when an installation goes wall to wall. Recess brackets are also commonly called 'inside mount'.

## **Projection**

Is a the distance from the back of the wall to the center of the pole. This measurement roughly denotes the distance from the wall that the curtain will drop. This is important when calculating wall clearance and wall stacking.

## **Fixing Plate Size**

Is the size of the back plate when mounted on the wall. It is used to compute any possible clearance issues.

## **Custom Brackets**

Are available, ranging from simple projection changes. To completely a original design. Due to our in-house design and manufacturing capabilities, we can do customs in volumes as little as 1 unit. All special projection brackets are charged at twice the cost of their standard projection equivalent. Brackets over 200mm (8") projection or that require a change to their backplate or an uplift/downlift of pole centre also attract special design charge per design drawing. Most custom brackets can be delivered within a 4 week lead-time. Please contact us for any custom bracket requests.

# GLIDERPOLE® Brackets • Curtain Drops

The information below shows the relationship between the gliderpole, brackets and gliders/rollers. This will enable the correlation between gliderpole heights and curtain drops to be easily calculated. Bracket projection measurements are from the back wall or ceiling to the centre of the gliderpole and are a good indicator of where the curtain will fall.

# HAND DRAWN GLIDERPOLES

## Providing pole lengths

Pole lengths can be specified in two ways.

**Option A** is our preferred method. This covers Pole length only. **Option B** combines pole and finial lengths.

Poles are cut, bent and curved to suit individual requirements.  
When calculating the length of your pole, remember to allow tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece 3.0m (118")\*.  
Poles exceeding the recommended maximum distance between brackets, will be cut into equal parts unless otherwise specified. Pole joiners will be supplied. Mid or passing brackets should be placed at every join.

- Square pole dimension - H27mm (1 1/16")
- Flat pole dimension - H36mm (1 7/16")
- Round pole diameters - Ø30mm (1 1/16") • 50mm (2")

The overall gliderpole cost is rounded up in 300mm (1ft) increments.

Glider/Roller type	maximum system length - single stack →	maximum system length - Pair stack →←	Maximum Section Length	Bracket Spacing
Glider	3000mm (10')	6000mm (20')	3000mm (10')	1000mm (3'3")
Roller	6000mm (20')	6000mm (20')	3000mm (10')	1000mm (3'3")

Where ever there is a join in the pole, this must always be supported by a bracket.

## Stacking

This is the area where the curtains hang against the wall when they are pulled open. by covering the wall and not the glass, during the day, it allows more light into the room.

Allow 30% of the length of the gliderpole for curtain stacking. very full curtains (e.g. pencil pleat) will need more space than flatter ones. Lined and interlined curtains will also require more stacking space than unlined.

Hand drawn systems are not supplied with overlap arms. Overlap arms can be added on request to systems using Gliders and Rollers. Wave systems are not compatible with overlap arms, the curtains are designed to butt together.

## Stacking options

With hand drawn systems stacking options are configured at the point of install as the gliders/rollers are free to be positioned anywhere.

**Single or pair stack Wave curtain stacking must be specified when ordering as this will affect the number of gliders/rollers installed into the gliderpole.**

**We recommend that when using Wave that brackets have a minimum projection of 100mm (4").**

# GLIDERPOLE® Hand Drawn • Curtain Heading - Standard

Standard headings have variable fullness but an average of 1.5 x pole width can be expected. Pinch pleats are created by several methods (hand sewn, automatic pleating tape, metal 4-prong hooks). Average fullness is around 2.0 x pole width. When properly pleated up, pencil pleat headings can use up to 2.5 x pole width from heavy curtains and as much as 3.0 x pole width for nets.

It should be noted that from an efficiency point of view standard headings and pinch pleats are greatly to be preferred. Pencil pleats stack back with much greater difficulty and cause friction.

Standard Fullness 1.5

Pinch Pleat Fullness 2.0

Pencil Pleat Fullness 3.0 (not recommended)

Gliders are suitable for most installations. One glider is specified for every 100mm (4").

Rollers are preferred for heavy drapery. One roller is specified for every 100mm (4").

Standard Headings Butt Joint

## Curtain Weights

Different types of fabric have widely differing weights. The type of curtain heading used (see below) will determine the fullness of the fabric used: this can be anything from 1.5 x the width of the pole to 3.0 x pole width.

The chart below assumes 100% fullness (2.0 x width of the pole) the weights are very approx and can vary for many reasons. Always check the expected and final total curtain weight with the curtain maker. based on 1200mm (48") fabric width

# GLIDERPOLE® Hand Drawn • Curtain Heading - Wave®

Wave is a simple **S** folded heading system consisting of gliders spaced by a cord and a special pocketed header tape that is sewn onto a flat panel curtain. When assembled in the pole, the gliders/rollers on the cord are spaced at spacings shown below and this fixes the 'pitch' of the Wave. The flat panel curtain(s) are made in the conventional way with the pocketed Wave header tape sewn to the header. Hooks are fitted to header tape at a set spacing creating the Wave effect

**Wave® gliders**  
60mm (2 3/8") spacing between the gliders.  
80mm (3 1/8") spacing between the gliders. **(standard)**

Glider-Cord Spacing	Curtain Hook Spacing	Approx. Curtain Fullness	Stack Depth	Min Bracket Projection
60mm (2 3/8")	120mm (4 3/4")	2.3	230mm (9 1/16") per 1M (39 3/8") of pole	100mm (4")
80mm (3 1/8")	160mm (6 5/16")	2.3	180mm (7 1/16") per 1M (39 3/8") of pole	100mm (4")

**Wave® rollers**  
80mm (3 1/8") spacing between the rollers

Roller-Cord Spacing	Curtain Hook Spacing	Approx. Curtain Fullness	Stack Depth	Min Bracket Projection
80mm (3 1/8")	160mm (6 5/16")	2.3	180mm (7 1/16") per 1M (39 3/8") of pole	100mm (4")

**Fabric suitability**  
There is no standard test that will indicate whether a fabric is suitable for Wave. However, experience suggests it is normally suitable for:

- Voiles
- Lined cotton
- Interlined Silk
- Blackout lining

The soft curves of Wave do not lend themselves to:

- stiff fabrics
- Heavy embroidery
- Irregular vertical stripes
- Metallic threads

# GLIDERPOLE® Hand Drawn • Maximum Weight Recommendations

Maximum weight recommendations for all standard curtain types using gliders & roller are defined to ensure safe and proper function of the corded system. These must be adhered to. See table below for details of all options. **Bends will considerably reduce the load bearing capability of any system.**
