SPECIFICATION GUIDE

SPECIFICATION GUIDE

This specification guide was designed to outline the main considerations that need to be made when quoting or ordering a system.

Please use this along side with the ⚡ | Electric Technical Guide's.

There is a guide for Silent Gliss • Somfy • Lutron system options which deal with specific details of those systems.

If any questions arise please call your local sales representative or contact The Bradley Collection directly.

Electrical installations must be carried out by qualified professionals. In line with the relevant wiring diagrams and conform to local regulations.

Brackets Page 55-62

Poles are cut, bent and curved to suit individual requirements. When calculating the length of your pole, remember to allow tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece 4.0m (157")[Ⓢ].
 Poles exceeding the maximum length will be cut into equal parts unless otherwise specified.
 Jointing system will be supplied. (See page 6) Brackets should be placed at every join.

Ø30mm (1 3/16") • 38mm (1 1/2")
 The overall pole cost is rounded up in 300mm (1ft) increments.

Diameter	Maximum distance between brackets	Minimum bend radius
Ø38mm (1 1/2")	1000mm (39")	R400mm (16")

PROVIDING POLE LENGTHS

Pole lengths can be specified in two ways.
OPTION A is our preferred method. This covers Pole length only. **OPTION B** combines pole and finial lengths.

SELECT TRACK TYPE & MOTOR

Specify you **DRIVE** from a choice from the leading motor brands. This provides power and control options ranging from standalone battery powered systems to fully integrated home automation solutions.

For double configurations a second **DRIVE** system can be specified.

It is also possible to specify a motor to the main curtain and a manual pole to the rear. Simply select **DRIVE** for the front pole and either **GLIDE** Ø30mm (1³/₁₆"") or 38mm (1¹/₂"") for the rear.

LUTRON

Single & Multi-channel hand held remote control options available.

App Control - Move

The system can be controlled with the Silent Gliss Move[®] app to allow control on smart devices.

Automation Systems

The system can also be intergrated with all major home control systems, and via Silent Gliss Smart[®] system allowing two way integration with all major home control systems^(A)

Drive's jointing system ensures perfect alignment between pole sections.

Joins must always be supported by a bracket.

38mm (1 1/2")

Bradley's bespoke service allows poles to be specifically made for unique bay windows and complex long span installations. Poles can be shaped to create a system that follows contours.

BRADLEY BAY CHECKER +

Bay Checker + is part of our Digital Toolbox, allowing you to check your measurement for bays and curves whilst onsite, as well as storing straight window dimensions for your projects.

Unlimited measurements may be saved locally to your device or shared to your colleagues.

Available as a free download for iOS or Android,

Drive can be customised to suit virtually any window. For simple projection changes between the Minimums and Maximums listed below brackets are charged at double their standard costs. For all other customisations an additional custom fee is applied per drawing

Custom Projection

Specify the exact projection needed.

Custom Fixing Plate

Relevant where space is restricted or weight is a concern.

Uplift

Helps negotiate cornice and similar architectural features.

Ceiling Brackets

Specify exact projection required from ceiling.

Angled Brackets

The solution for tight and awkward locations.

Minimum & Maximum Bracket Projections

Dimensions outside of these stated min/max projections may still be possible but will generate a design charge per drawing. See price list for details

CONFIGURATION

A looped driving belt runs around the motor and along the pole. This is attached to the pilot header which in turn is attached to the lead glider/roller.

DRIVE SYSTEM - SINGLE STACK →

On single stack systems the motor is always positioned on the stacking side. Allowing the motor to be hidden behind the curtain.

DRIVE SYSTEM - PAIR STACK →←

Pair stack curtains can have the motor positioned at either end of the pole. Curtains must be equal in length

TWIN DRIVE SYSTEM - PAIR STACK →←

Twin Drive systems have the motor positioned at both ends of the pole. And are pair stack curtains only which can be different in length

MOTOR POSITIONING

Mains powered motor's needs to be positioned on same side of the window as the power supply.

Wiring diagrams are available on request

Motorised systems are unsuitable for use outdoors or in damp environments such as shower rooms and bathrooms.

Technical drawing of the bottom view of a rectangular object. The drawing shows a long, thin rectangular shape with various mounting features along its bottom edge. On the left side, there are two circular mounting points, a rectangular bracket with a screw, and another circular mounting point. In the center, there is a battery pack with two '+' and '-' symbols, and a control unit with two circular ports. On the right side, there are two circular mounting points, a rectangular bracket with a screw, and another circular mounting point. The drawing is a line drawing with no shading.

STACK SIZES

This is the area where the curtains hang against the wall when they are pulled open. by covering the wall and not the glass, during the day, it allows more light into the room. Allow approximately 30% of the length of the track for curtain stacking, very full curtains (e.g. pencil pleat) will need more space than flatter ones. lined and interlined curtains will also require more stacking space than unlined.

SINE & RIPPLE HEADINGS

Sine & Ripple headings are a simple S folded heading system consisting of rollers spaced by a cord and a special pocketed header tape that is sewn onto a flat panel curtain.track. it offers an elegant, contemporary look.

- Ideal for both residential and commercial settings.
- Drapery is constructed special pocketed header tape that is sewn onto a flat panel curtain
- Hooks are fitted to header tape at a set spacing shown below creating the ripple effect
- Fullness can be adjusted by changing the hook spacing.

FABRIC SUITABILITY

There is no standard test that will indicate whether a fabric is suitable for wave style. However, experience suggests it is normally suitable for:

✓ Voiles • Lined cotton • Interlined Silk • Blackout lining

The soft curves of Wave do not lend themselves to:

✗ Stiff fabrics • Heavy embroidery • Irregular vertical stripes • Metallic threads

SINE GLIDERS • METALCOAT SINE GLIDERS
 Gliders are suitable for most installations.
Sine Pitch: 80mm (3 1/8")
Sine Glider Colour Options: Gypsum • Anthracite
Metalcoat Sine Colour Options: System Colour © • Brushed Nickel

RIPPLE ROLLERS
 Rollers are preferred for heavy drapery.
Ripple Pitch: 80mm (3 1/8")
Ripple Roller Colour Options: White • Black

80mm (3 1/8")	160mm (6 5/16")	2.3	180mm (7 1/16")	100mm (4")

RIPPLEFOLD HEADING

Ripplefold pleat style is named for the soft, consistent ripples created by the drapery as it hangs from the track. It offers an elegant, contemporary look.

- Ideal for both residential and commercial settings.
- Drapery is constructed with snap tape (graber® is required) that allows the drapery to be snapped directly to the auxillary carriers on the track.
- Fullness of the drapery is determined by the spacing of the carriers in the track. the higher the fullness factor, the more full the draperies appear.
- 3 fullness factors are available

RIPPLEFOLD ROLLERS

Rollers are preferred for heavy drapery.

Roller pendants are pre-installed into the pole

Curtains need to be offered up to pole and snapped into place

Different types of fabric have widely differing weights. The type of curtain heading used (see below) will determine the fullness of the fabric used: this can be anything from 1.5 x the width of the pole to 3.0 x pole width.

The chart below assumes 100% fullness (2.0 x width of the pole) the weights are very approx and can vary for many reasons. Always check the expected and final total curtain weight with the curtain maker. Based on 1200mm (48") fabric width

Gliders One glider is specified for every 100mm (4").

Sine Gliders 80mm (3 1/8") spacing between the gliders.

Maximum weight recommendations for all standard curtain types using Gliders are defined to ensure safe and proper function of the system. These must be adhered to. See table below for details of all options.

Bends will considerably reduce the load bearing capability of any system.
