SPECIFICATION GUIDE

## SPECIFICATION GUIDE

This specification guide was designed to outline the main considerations that need to be made when quoting or ordering a system.

Please use this alongside the Electric Technical Guides.

There is a guide for Silent Gliss • Somfy • Lutron system options which deal with specific details of those systems.

If any questions arise please call your local sales representative or contact The Bradley Collection directly.

**Electrical installations must be carried out by qualified professionals. In line with the relevant wiring diagrams and conform to local regulations.**

### Poles Page 53-65

### Brackets Page 66-75

Poles are cut, bent and curved to suit individual requirements. When calculating the length of your pole, remember to allow a tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece is 4.0m (157")<sup>Ⓢ</sup>.  
Poles exceeding the maximum length will be cut into equal parts unless otherwise specified.  
Joining system will be supplied. (See page 6) Brackets should be placed at every join.

Ø38mm (1½")  
The overall pole cost is rounded up in 300mm (1ft) increments.

Size	Maximum distance between brackets	Maximum length in one piece	Standard Bend radius
Ø38mm (1½")	1000mm (39")	4000mm (157") <sup>Ⓢ</sup>	R400mm (16")

<sup>Ⓢ</sup> Supplied in sections - Section lengths over 3.0m (118") will incur a handling charge  
For full technical information, sizes and weights please download the specification guide - [www.bradleycollection.com/downloads/](http://www.bradleycollection.com/downloads/)

PROVIDING POLE LENGTHS

Pole lengths can be specified in two ways.  
**OPTION A** is our preferred method. This covers Pole length only. **OPTION B** combines pole and finial lengths.

## SELECT TRACK TYPE & MOTOR

Specify your **DRIVE** from a choice from the leading motor brands. This provides power and control options ranging from standalone battery powered systems to fully integrated home automation solutions.

For double configurations a second **DRIVE** system can be specified.

It is also possible to specify a motor to the main curtain and a manual pole to the rear. Simply select **DRIVE** for the front pole and either **GLIDE** Ø30mm (1<sup>3</sup>/<sub>16</sub>"") or 38mm (1<sup>1</sup>/<sub>2</sub>"") for the rear.

Bradley's bespoke service allows poles to be specifically made for unique bay windows and complex long span installations. Poles can be shaped to create a system that follows contours.

! Return bends are not available.

## BRADLEY BAY CHECKER +

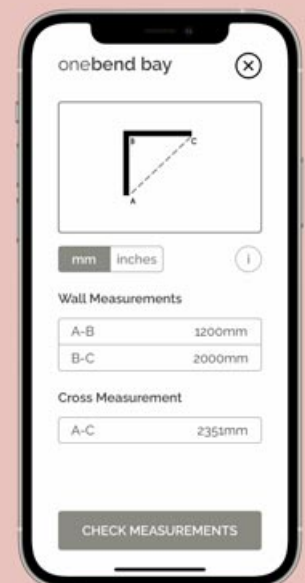

Bay Checker + is part of our Digital Toolbox, allowing you to check your measurement for bays and curves whilst onsite, as well as storing straight window dimensions for your projects.

Unlimited measurements may be saved locally to your device or shared to your colleagues.

Available as a free download for iOS or Android,

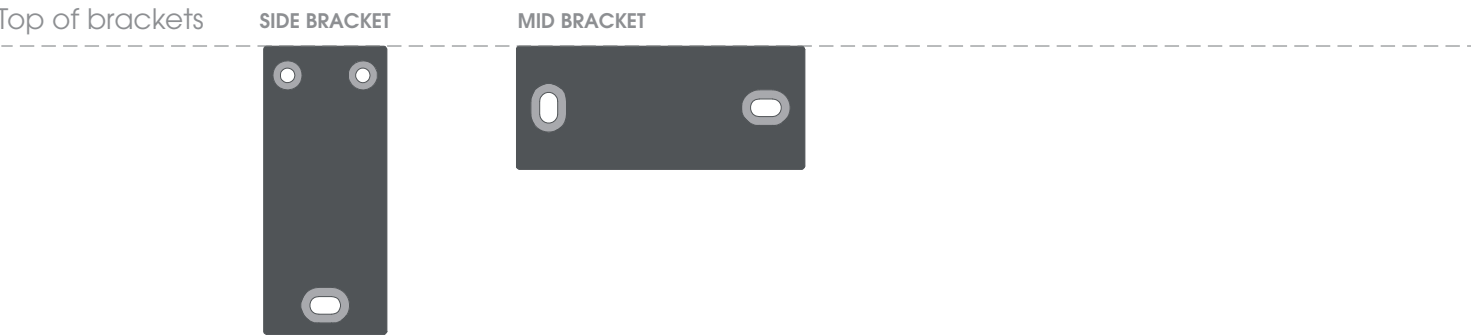

For more information on Bay Checker + and latest enhancements to our Digital Toolbox visit

### CONFIGURATION

A looped driving belt runs around the motor and along the pole. This is attached to the pilot header which in turn is attached to the lead glider/roller.

#### **SINGLE DRIVE - *Single Stack*** ►

On single stack systems the motor is always positioned on the stacking side. Allowing the motor to be hidden behind the curtain.

#### **SINGLE DRIVE - *Pair Stack*** ►◄

Pair stack curtains can have the motor positioned at either end of the pole. Curtains must be equal in length

#### **TWIN DRIVE - *Pair Stack*** ►◄

Twin Drive systems have the motor positioned at both ends of the pole. And are pair stack curtains only which can be different in length

### MOTOR POSITIONING

Mains powered motor's needs to be positioned on same side of the window as the power supply.

Wiring diagrams are available on request

Motorised systems are unsuitable for use outdoors or in damp environments such as shower rooms and bathrooms.

#### ⚡ MAINS POWERED SYSTEMS

#### 🔋 BATTERY POWERED SYSTEMS SOMFY® MOVELITE & IRISMO ONLY

#### LEFT HAND MOTOR

#### RIGHT HAND MOTOR

#### TWIN MOTORS

### LUTRON CONFIGURATION

Motor adaptors are supplied to match system colour. Motors can be positioned either perpendicular or in-line with the track. A gliding option is assembled between the motor adaptor and the end of the pole, serving as a curtain hook point.

#### MOTOR END - PERPENDICULAR *Default*

As standard motor position is set perpendicular to the pole.  
Minimising non functioning gliding area.  
Optimal for Sine and Ripplefold headings.

#### MOTOR END - IN-LINE *Option*

As an option motor position can be set in-line with the pole.  
Allowing for the system to sit closer to the wall where space is limited.  
This increases the non-functioning gliding area.

Not recommended for Sine and Ripplefold headings.

#### RETURN END - SINGLE STACK ►

Single stack systems utilise a smaller return cartridge embedded in the profile.  
Master carriers are designed to allow curtains travel to the end of the system.

#### RETURN END - PAIR STACK ►◄

Pair stack systems use the standard return cartridge embedded within the profile.  
A gliding option is assembled between the cartridge and the end of the pole, serving as a curtain hook point.

#### TWIN END - PAIR STACK ►◄

Twin systems are supplied in a minimum of two sections, with an internal return cartridge, in the end of each section.

Mid brackets can be fitted on join

## STACK SIZES

This is the area where the curtains hang against the wall when they are pulled open. by covering the wall and not the glass, during the day, it allows more light into the room. Allow approximately 30% of the length of the track for curtain stacking, very full curtains (e.g. pencil pleat) will need more space than flatter ones. lined and interlined curtains will also require more stacking space than unlined.

## SINE HEADINGS

Sine headings are a simple **S** folded heading system consisting of rollers spaced by a cord and a special pocketed header tape that is sewn onto a flat panel curtain.track. it offers an elegant, contemporary look.

- Ideal for both residential and commercial settings.
- Drapery is constructed using special pocketed header tape that is sewn onto a flat panel curtain
- Hooks are fitted to header tape at a set spacing shown below creating the ripple effect
- Fullness can be adjusted by changing the hook spacing.

### FABRIC SUITABILITY

There is no standard test that will indicate whether a fabric is suitable for wave style. However, experience suggests it is normally suitable for:

✓ Voiles • Lined cotton • Interlined Silk • Blackout lining

The soft curves of Sine do not lend themselves to:

✗ Stiff fabrics • Heavy embroidery • Irregular vertical stripes • Metallic threads

### SINE GLIDERS

*Glider are suitable for most installations*

RIPPLEFOLD HEADING

Ripplefold pleat style is named for the soft, consistent ripples created by the drapery as it hangs from the track. It offers an elegant, contemporary look.

- Ideal for both residential and commercial settings.
- Drapery is constructed with snap tape (Graber®/Kirsch) that allows the drapery to be snapped directly to the auxillary carriers on the track.
- Fullness of the drapery is determined by the spacing of the carriers in the track. the higher the fullness factor, the more full the draperies appear.
- 3 fullness factors are available

RIPPLEFOLD

RIPPLEFOLD ROLLERS

*Rollers are preferred for heavy drapery & Systems with joins*

**Ripplefold® Fullness:** 80% • 100%

**Metalcoat Ripplefold® Roller Colour Options:** System Colour ☺

	Roller-Cord Spacing	Curtain Fullness	Stack Depth per 1M (39 3/8") of pole	Min Bracket Projection
	60mm (2 3/8")	80%	270mm (10 5/8")	100mm (4")
	55mm (2 1/16")	100%	310mm (12 3/16")	100mm (4")

Different types of fabric have widely differing weights. The type of curtain heading used (see below) will determine the fullness of the fabric used: this can be anything from 1.5 x the width of the pole to 3.0 x pole width.

The chart below assumes 100% fullness (2.0 x width of the pole) the weights are approximate and can vary for many reasons. Always check the expected and final total curtain weight with the curtain maker. Based on 1200mm (48") fabric width
