SPECIFICATION GUIDE

## SPECIFICATION GUIDE

This specification guide was designed to outline the main considerations that need to be made when quoting or ordering a system.

If any questions arise please call your local sales representative or contact The Bradley Collection directly.

Poles are cut, bent and curved to suit individual requirements. When calculating the length of your pole, remember to allow a tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece is 4.0m (157")<sup>Ⓢ</sup>.  
Poles exceeding the maximum length will be cut into equal parts unless otherwise specified.  
Joining system will be supplied. (See page 5) Brackets should be placed at every join.

Ø38mm (1½")  
The overall pole cost is rounded up in 300mm (1ft) increments.

| Size        | Maximum distance between brackets | Maximum length in one piece | Standard Bend radius |
|-------------|-----------------------------------|-----------------------------|----------------------|
| Ø38mm (1½") | 1000mm (39")                      | 4000mm (157") <sup>Ⓢ</sup>  | R400mm (16")         |

<sup>Ⓢ</sup> Supplied in sections - Section lengths over 3.0m (118") will incur a handling charge

PROVIDING POLE LENGTHS

Pole lengths can be specified in two ways.  
**OPTION A** is our preferred method. This covers Pole length only. **OPTION B** combines pole and finial lengths.

A - PREFERRED OPTION

B

\*Section lengths over 3.0m (118") will incur a handling charge

ePOLE's jointing system ensures perfect alignment between pole sections.

Joints must always be supported by a bracket.

38mm (1 1/2")

Bradley's bespoke service allows poles to be specifically made for unique bay windows and complex long span installations. Poles can be shaped to create a system that follows contours.

MINIMUM WALL SIZES

The table below is a guide for the minimum wall size required.

The standard bend radius shown is the minimum radius achievable.

*Note: changes in angles and projections will alter the minimum wall sizes required*

BRADLEY

BAY CHECKER

+

Bay Checker + is part of our Digital Toolbox, allowing you to check your measurement for bays and curves whilst onsite, as well as storing straight window dimensions for your projects.

Unlimited measurements may be saved locally to your device or shared to your colleagues.

Available as a free download for iOS or Android,

For more information on Bay Checker + and latest enhancements to our Digital Toolbox visit

The information below shows the relationship between the bracket backplate. This will enable easy alignments during installation.

SINGLE BRACKETS

DOUBLE BRACKETS

Gliderpole can be customised to suit virtually any window. For simple projection changes between the Minimums and Maximums listed below brackets are charged at double their standard costs. For all other customisations an additional custom fee is applied per drawing

Custom Projection

Specify the exact projection needed.

Custom Fixing Plate

Relevant where space is restricted or weight is a concern.

Uplift

Helps negotiate cornice and similar architectural features.

Ceiling Brackets

Specify exact projection required from ceiling.

Angled Brackets

The solution for tight and awkward locations.

MINIMUM & MAXIMUM BRACKET PROJECTIONS

Dimensions outside of these stated min/max projections may still be possible but will generate a design charge per drawing. See Price List for details

Note the custom projection brackets design will be different from the standard design.

## PIN HOOK MEASUREMENT *From bottom of the pole*

## CONFIGURATION

A looped driving belt runs around the motor and along the pole. This is attached to the pilot header which in turn is attached to the lead glider/roller.

### **SINGLE DRIVE - *Single Stack*** ►

On single stack systems the motor is always positioned on the stacking side. Allowing the motor to be hidden behind the curtain.

### **SINGLE DRIVE - *Pair Stack*** ►◄

Pair stack curtains can have the motor positioned at either end of the pole. Curtains must be equal in length

### **TWIN DRIVE - *Pair Stack*** ►◄

Twin Drive systems have the motor positioned at both ends of the pole. And are pair stack curtains only which can be different in length

## MOTOR POSITIONING

Mains powered motor's needs to be positioned on same side of the window as the power supply.

Wiring diagrams are available on request

Motorised systems are unsuitable for use outdoors or in damp environments such as shower rooms and bathrooms.

## MOTOR END

All systems have a cartridge embedded within the profile at the motor end. A gliding option is assembled between the cartridge and the end of the pole, serving as a curtain hook point.

## RETURN END - SINGLE STACK ►

Single stack systems utilise a smaller return cartridge embedded in the profile. Master carriers are designed to allow curtains travel to the end of the system.

## RETURN END - PAIR STACK ►◄

Pair stack systems use the standard return cartridge embedded within the profile. A gliding option is assembled between the cartridge and the end of the pole, serving as a curtain hook point.

## TWIN END - PAIR STACK ►◄

Twin systems are supplied in a minimum of two sections, with an internal return cartridge, in the end of each section.

Mid brackets can be fitted on join

## GLIDER/ROLLER ACCESS

Gliding options can be added/removed by removing the access plate.

Systems will be supplied as per the diagrams below.

## STACK SIZES

This is the area where the curtains hang against the wall when they are pulled open. By covering the wall rather than the glass, during the day, it allows more light into the room. Allow approximately 30% of the length of the pole for curtain stacking. Very full curtains (e.g. pencil pleat) will need more space than flatter ones. Lined and interlined curtains will also require more stacking space than unlined.

STANDARD HEADINGS

**GLIDERS**  
*Gliders are suitable for most installations*  
One glider is specified for every 100mm (4")  
**Glider Colour Options:** Gypsum • Anthracite

**ROLLERS**  
*Rollers are preferred for heavy drapery & systems with joins*  
One roller is specified for every 100mm (4")  
**Roller Colour Options:** Gypsum • Anthracite

STANDARD  
Fullness 1.5

PINCH PLEAT  
Fullness 2.0

PENCIL PLEAT  
Fullness 2.5 (Heavy)  
Fullness 2.5 (Voiles)

Pencil pleats will have a larger stack back and performance may be reduced

## SINE HEADINGS

Sine headings are a simple **S** folded heading system consisting of rollers spaced by a cord and a special pocketed header tape that is sewn onto a flat panel curtain pole. It offers an elegant, contemporary look.

- Ideal for both residential and commercial settings.
- Drapery is constructed using special pocketed header tape that is sewn onto a flat panel curtain
- Hooks are fitted to header tape at a set spacing shown below creating the ripple effect
- Fullness can be adjusted by changing the hook spacing.

### FABRIC SUITABILITY

There is no standard test that will indicate whether a fabric is suitable for wave style. However, experience suggests it is normally suitable for:

✓ Voiles • Lined cotton • Interlined Silk • Blackout lining

The soft curves of Sine do not lend themselves to:

✗ Stiff fabrics • Heavy embroidery • Irregular vertical stripes • Metallic threads

### SINE GLIDERS

*Glider are suitable for most installations*

**Sine Pitch:** 80mm (3 1/8")

**Sine Glider Colour Options:** Gypsum - White Cord • Anthracite - White Cord

| Glider-Cord Spacing | Curtain Hook Spacing | Approx. Curtain Fullness | Stack Depth<br>per 1M (39 3/8") of pole | Min Bracket Projection |
|---------------------|----------------------|--------------------------|-----------------------------------------|------------------------|
| 80mm (3 1/8")       | 160mm (6 3/16")      | 2.3                      | 180mm (7 1/16")                         | 100mm (4")             |

### SINE ROLLER

*Rollers are preferred for heavy drapery & systems with joins*

**Sine Pitch:** 60mm (2 3/8") • 80mm (3 1/8")

**Sine Roller Colour Options:** Gypsum - White Cord • Anthracite - Black Cord

| Roller-Cord Spacing | Curtain Hook Spacing | Approx. Curtain Fullness | Stack Depth<br>per 1M (39 3/8") of pole | Min Bracket Projection |

RIPPLEFOLD HEADING

Ripplefold pleat style is named for the soft, consistent ripples created by the drapery as it hangs from the pole. It offers an elegant, contemporary look.

- Ideal for both residential and commercial settings.
- Drapery is constructed with snap tape (Graber®/Kirsch) that allows the drapery to be snapped directly to the auxiliary carriers on the pole.
- Fullness of the drapery is determined by the spacing of the carriers in the pole, the higher the fullness factor, the more full the draperies appear.
- 3 fullness factors are available

Different types of fabric have widely differing weights. The type of curtain heading used (see below) will determine the fullness of the fabric used: this can be anything from 1.5 x the width of the pole to 3.0 x pole width.

The chart below assumes 100% fullness (2.0 x width of the pole) the weights are approximate and can vary for many reasons. Always check the expected and final total curtain weight with the curtain maker. Based on 1200mm (48") fabric width

Maximum weight recommendations for all standard curtain types using gliders & roller are defined to ensure safe and proper function of the system. These limits must be adhered to. See table below for details of all options.

Bends will considerably reduce the load bearing capability of any system.
