SPECIFICATION GUIDE

This specification guide was designed to outline the main considerations that need to be made when quoting or ordering a system.

Please use this alongside the Electric Technical Guides.

There is a guide for Silent Gliss • Somfy • Lutron system options which deal with specific details of those systems.

If any questions arise please call your local sales representative or contact The Bradley Collection directly.

Brackets Page 49-58

Electrical installations must be carried out by qualified professionals in accordance with the relevant wiring diagrams and local regulations.

Tracks are cut, bent and curved to suit individual requirements.
When calculating the length of your track, remember to allow a tolerance beyond the width of the frame for the curtains to stack back to the edge of the window.

Tracks exceeding the maximum length will be cut into equal parts unless otherwise specified.
Joining system will be supplied. (See page 6) Brackets should be placed at every join.

Size	Maximum distance between brackets	Maximum length in one piece	Standard Bend radius
H27mm (1 1/8") W32mm (1 1/4")	1000mm (39")	4000mm (157")Ⓢ	R275mm (10 13/16")

Double Linear systems may be specified with a motor to front and rear.
It is also possible to specify a motor to the main curtain and a manual track to the rear.

PROVIDING TRACK LENGTHS

Track lengths can be specified in two ways.
OPTION A is our preferred method. This covers Track length only. **OPTION B** combines track and finial lengths.

A - PREFERRED OPTION

B

Ⓢ Supplied in sections - Section lengths over 3.0m (118") will incur a handling charge

SELECT TRACK TYPE & MOTOR

Specify your motor type from a choice from the leading brands. This provides power and control options ranging from standalone battery powered systems to fully integrated home automation solutions.

For double configurations a second MOTOR system can be specified.

It is also possible to specify a motor to the main curtain and a manual track to the rear.

Linear's jointing system ensures perfect alignment between track sections.

Joins must always be supported by a bracket.

Bradley's bespoke service allows tracks to be specifically made for unique bay windows and complex long span installations. Tracks can be shaped to create a system that follows contours.

MINIMUM WALL SIZES

The table below is a guide for the minimum wall size required.

The standard bend radius shown is the minimum radius achievable.

Note: changes in angles and projections will alter the minimum wall sizes required

SINGLE SYSTEM

DOUBLE SYSTEMS

Linear can be customised to suit virtually any window. For simple projection changes between the minimums and maximums listed above, brackets are charged at double their standard cost. For all other customisations an additional up-charge and custom fee is applied per drawing.

Custom Projection

Specify the exact projection needed.

Custom Fixing Plate

Relevant where space is restricted or weight is a concern.

Uplift

Helps negotiate cornice & similar architectural features.

Ceiling Brackets

Specify exact drop required from ceiling.

Angled Brackets

The solution for tight and awkward locations.

MINIMUM & MAXIMUM BRACKET PROJECTIONS

Dimensions outside of these stated min/max projections may still be possible but will generate a design charge per drawing. See pricelist for details

Size	Type	Standard Projection(s)	Minimum Special Projection	Maximum Special Projection
H27mm (1 1/16")	Side	100mm (4")	95mm (3 3/4")	200mm (8")

The information below shows the relationship between the track, brackets and gliders/rollers. This will enable the correlation between track heights and curtain drops to be easily calculated.

SINGLE SYSTEM - H27mm (1 1/16")

DOUBLE SYSTEM - FRONT H27mm (1 1/16") BACK H27mm (1 1/16")

PIN HOOK MEASUREMENT *From bottom of the track*

CONFIGURATION

A looped driving belt runs around the motor and along the track. This is attached to the pilot header which in turn is attached to the lead glider/roller.

SINGLE MOTOR - *Single Stack* ▶

On single stack systems the motor is always positioned on the stacking side. Allowing the motor to be hidden behind the curtain.

SINGLE MOTOR - *Pair Stack* ▶◀

Pair stack curtains can have the motor positioned at either end of the track. Curtains must be equal in length

TWIN MOTOR - *Pair Stack* ▶◀

Twin Motor systems have the motor positioned at both ends of the track. And are pair stack curtains only which can be different in length

MOTOR POSITIONING

Mains powered motor's needs to be positioned on same side of the window as the power supply.

Wiring diagrams are available on request

Motorised systems are unsuitable for use outdoors or in damp environments such as shower rooms and bathrooms.

TWIN MOTORS

LUTRON CONFIGURATION

Motor adaptors are supplied to match system colour. Motors can be positioned either perpendicular or in-line with the track. A gliding option is assembled between the motor adaptor and the end of the track, serving as a curtain hook point.

MOTOR END - PERPENDICULAR *Default*

As standard motor position is set perpendicular to the track.
Minimising non functioning gliding area.
Optimal for Sine and Ripplefold headings.

MOTOR END - IN-LINE *Option*

As an option motor position can be set in-line with the track.
Allowing for the system to sit closer to the wall where space is limited.
This increases the non-functioning gliding area.

Not recommended for Sine and Ripplefold headings.

RETURN END - SINGLE STACK ►

Single stack systems utilise a smaller return cartridge embedded in the profile.
Master carriers are designed to allow curtains travel to travel to the end of the system.

RETURN END - PAIR STACK ►◄

Pair stack systems use the standard return cartridge embedded within the profile.
A gliding option is assembled between the cartridge and the end of the track, serving as a curtain hook point.

TWIN END - PAIR STACK ►◄

Twin systems are supplied in a minimum of two sections, with an internal return cartridge, in the end of each section.

Mid brackets can be fitted on join

STACK SIZES

This is the area where the curtains hang against the wall when they are pulled open. by covering the wall and not the glass, during the day, it allows more light into the room. Allow approximately 30% of the length of the track for curtain stacking, very full curtains (e.g. pencil pleat) will need more space than flatter ones. lined and interlined curtains will also require more stacking space than unlined.

SINE HEADINGS

Sine headings are a simple **S** folded heading system consisting of rollers spaced by a cord and a special pocketed header tape that is sewn onto a flat panel curtain.track. It offers an elegant, contemporary look.

- Ideal for both residential and commercial settings.
- Drapery is constructed using special pocketed header tape that is sewn onto a flat panel curtain
- Hooks are fitted to header tape at a set spacing shown below creating the ripple effect
- Fullness can be adjusted by changing the hook spacing.

FABRIC SUITABILITY

There is no standard test that will indicate whether a fabric is suitable for wave style. However, experience suggests it is normally suitable for:

Voiles • Lined cotton • Interlined Silk • Blackout lining

The soft curves of Sine do not lend themselves to:

Stiff fabrics • Heavy embroidery • Irregular vertical stripes • Metallic threads

SINE GLIDERS

Glidens are suitable for most installations

Sine Pitch: 80mm (3 1/8")

Sine Glider Colour Options: Gypsum - White Cord • Anthracite - White Cord

Glider-Cord Spacing	Curtain Hook Spacing	Approx. Curtain Fullness	Stack Depth per 1M (39 3/8") of track	Min Bracket Projection

SINE ROLLERS • METALCOAT SINE ROLLERS

Rollers are preferred for heavy drapery & Systems with joins

Sine Pitch: 60mm (2 3/8") • 80mm (3 1/8")

Sine Roller Colour Options: Gypsum - White Cord • Anthracite - Black Cord

Metalcoat Sine Roller Colour Options: System Colour ☺

Roller-Cord Spacing	Curtain Hook Spacing	Approx. Curtain Fullness	Stack Depth per 1M (39 3/8") of track	Min Bracket Projection

80mm (3 1/8")	160mm (6 3/16")	2.3	180mm (7 1/16")	100mm (4")

RIPPLEFOLD HEADING

Ripplefold pleat style is named for the soft, consistent ripples created by the drapery as it hangs from the track. It offers an elegant, contemporary look.

- Ideal for both residential and commercial settings.
- Drapery is constructed with snap tape (Graber®/Kirsch) that allows the drapery to be snapped directly to the auxiliary carriers on the track.
- Fullness of the drapery is determined by the spacing of the carriers in the track. the higher the fullness factor, the more full the draperies appear.
- 3 fullness factors are available

RIPPLEFOLD

RIPPLEFOLD ROLLERS

Rollers are preferred for heavy drapery & Systems with joins

Ripplefold® Fullness: 80% • 100% • 120%

Metalcoat Ripplefold® Roller Colour Options: System Colour ☺

	Roller-Cord Spacing	Curtain Fullness	Stack Depth per 1M (39 3/8") of pole	Min Bracket Projection

	55mm (2 1/16")	100%	310mm (12 3/16")	100mm (4")
	45mm (1 3/4")	120%	360mm (14 3/16")	100mm (4")

Different types of fabric have widely differing weights. The type of curtain heading used (see below) will determine the fullness of the fabric used: this can be anything from 1.5 x the width of the pole to 3.0 x pole width.

The chart below assumes 100% fullness (2.0 x width of the pole) the weights are approximate and can vary for many reasons. Always check the expected and final total curtain weight with the curtain maker. Based on 1200mm (48") fabric width
