SYSTEM INFORMATION

HAND DRAWN POLES

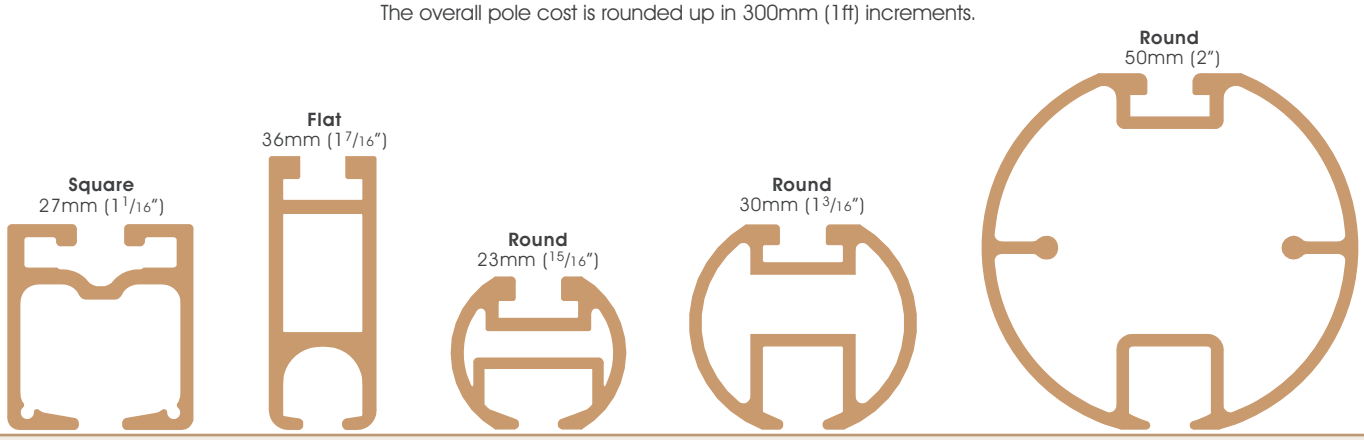

Poles are cut, bent and curved to suit individual requirements. When calculating the length of your pole, remember to allow tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece 3.0m (118")*.
Poles exceeding the recommended maximum distance between brackets, will be cut into equal parts unless otherwise specified. Pole joiners will be supplied. Brackets should be placed at every join.

HAND DRAWN

SQUARE POLE - H27mm (1 1/16") FLAT POLE - H36mm (1 7/16") Round pole - Ø23mm (15/16") • 30mm (1 3/16") • 50mm (2")

The overall pole cost is rounded up in 300mm (1ft) increments.

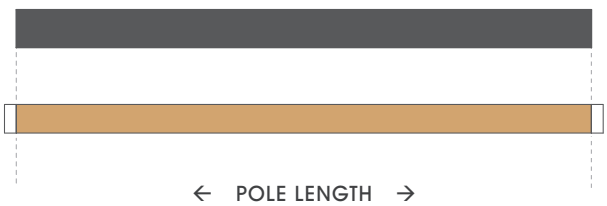

Glider/Roller type	Maximum system length *Single Stack ►*	Maximum system length *Pair Stack ▸|◂*	Maximum Section Length	Bracket Spacing
Glider/Wave - Glider	3000mm (10')	6000mm (20')	3000mm (10')	1000mm (3'3")
Roller/Wave - Roller	6000mm (20')	6000mm (20')	3000mm (10')	1000mm (3'3")

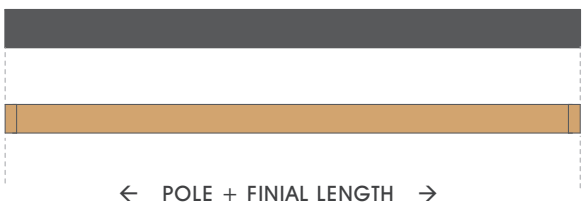

PROVIDING POLE LENGTHS

Pole lengths can be specified in two ways.
OPTION A is our preferred method. This covers Pole length only. **OPTION B** combines pole and finial lengths.

A - PREFERRED OPTION

B

*Section lengths over 3.0m (118") will incur a handling charge

EDGE HAND DRAWN POLES

Edge is the epitome of understatement, being sleek, discreet and integrated.

ADJUSTABLE END STOP

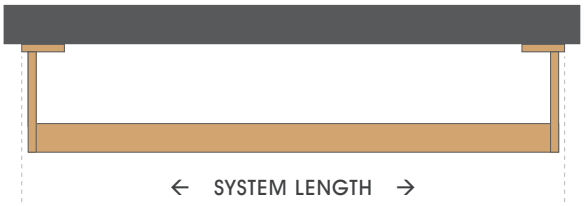

The bracket has been designed with an adjustable end stop, which allows curtains to be hung at the same height as the gliders/rollers used in the track system.

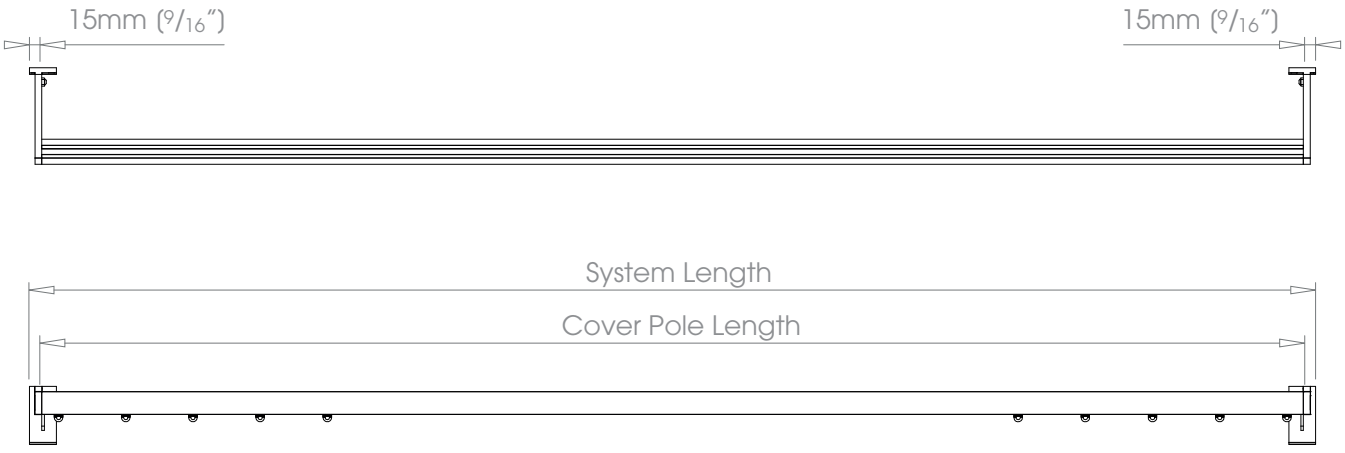

PROVIDING POLE LENGTHS

System lengths should be specified between bracket edges.

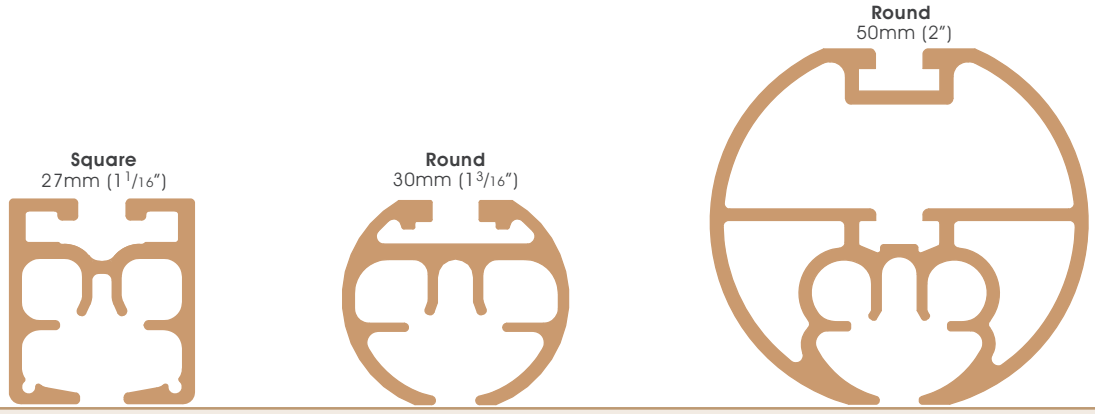

Poles are cut, bent and curved to suit individual requirements. When calculating the length of your pole, remember to allow tolerance beyond the width of the frame for the curtains to draw back to the edge of the window.

Maximum pole length in one piece 3.0m (118")*.
Poles exceeding the recommended maximum distance between brackets, will be cut into equal parts unless otherwise specified. Pole joiners will be supplied. Brackets should be placed at every join.

BESPOKE BAYS

Bradley's bespoke service allows poles to be specifically made for unique bay windows and complex long span installations. Poles can be shaped to create a system that follows contours. Passing rings have been designed to traverse over brackets and around bends. Using a double pole system in a bay window can create an elegant as well as practical treatment.

Standard bend radius show is the minium radius achievable.
Projection shown for return bends, is the minimum requirement to clear the corner at point **A**.

Note: changes in angles and projections will alter the minimum wall sizes required

SINGLE BRACKETS

EDGE - Single Brackets

DOUBLE BRACKETS

CUSTOM BRACKETS

Gliderpole can be customised to suit virtually any window. For simple projection changes between the Minimums and Maximums listed below brackets are charged at double their standard costs. For all other customisations an additional custom fee is applied per drawing

Custom Projection

Specify the exact projection needed.

Custom Fixing Plate

Relevant where space is restricted or weight is a concern.

Uplift

Helps negotiate cornice and similar architectural features.

Ceiling Brackets

Specify exact projection required from ceiling.

Angled Brackets

The solution for tight and awkward locations.

MINIMUM & MAXIMUM BRACKET PROJECTIONS

Dimensions outside of these stated min/max projections may still be possible but will generate a design charge per drawing. See Price List for details

! Note the custom projection brackets design will be different from the standard design.

TWIN CORD - PAIR STACK ▶|◀

Supplied with 2x Wave Extension Arm (6364) & 2x Wave Hanger (6365).

TRACK FITTING HEIGHT - CORD LENGTH

Cord will be supplied looping 1.5M (59") off the floor. If track fitting height is not supplied the cord will automatically be supplied at 1.0M (39") drop.

This information must be supplied for us to comply with **BS EN 13120:2009+A12014** cord safety standard.

All corded tracks are supplied with a cord retainer to ensure that all cords are safely secured to the wall.

This will be supplied in the same finish as the system unless advised otherwise.

SINGLE CORD

A control cord can be specified either on the left or right side of the track with a return pulley on the opposite side. Single cord systems allow control of either a single curtain or a pair of curtains simultaneously. Single cord systems can be specified as either single or pair stack.

SINGLE STACK ▶

PAIR STACK ▶|◀

TWIN CORD

A control cord can be specified at both ends of the track. This allows independent control of each curtain on the track, useful for controlling sunlight and when heavier fabrics are being used etc. Twin cord systems can only be specified as pair stack.

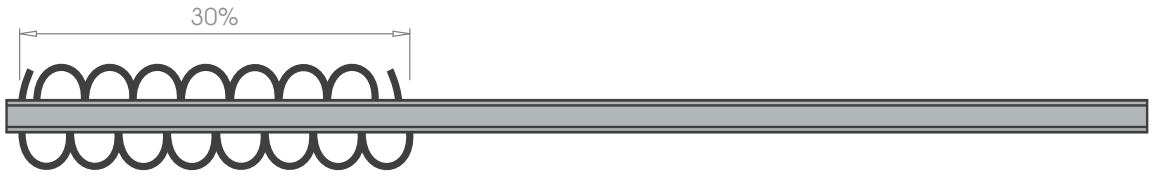

PAIR STACK ▶|◀

STACK SIZES

This is the area where the curtains hang against the wall when they are pulled open. by covering the wall and not the glass, during the day, it allows more light into the room. Allow approximately 30% of the length of the track for curtain stacking. very full curtains (e.g. pencil pleat) will need more space than flatter ones. lined and interlined curtains will also require more stacking space than unlined.

CORD COLOUR

Cord can be specified in either black and white.

CORD HOUSING

The cord housing is cut into the track and is included in the overall track measurement.

CURTAIN HEADINGS

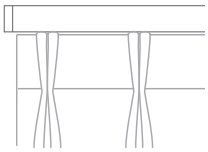

Standard headings have variable fullness but an average of 1.5 x pole width can be expected. Pinch pleats are created by several methods (hand sewn, automatic pleating tape, metal 4-prong hooks). Average fullness is around 2.0 x pole width. When properly pleated up, pencil pleat headings can use up to 2.5 x pole width for heavy curtains and as much as 3.0 x pole width for nets.

It should be noted that from an efficiency point of view standard headings and pinch pleats are preferred. Pencil pleats stack back with much greater difficulty and cause friction.

GLIDERS
Gliders are suitable for most installations.
one glider is specified for every 100mm (4").

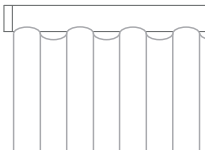

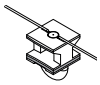

ROLLERS
Rollers are preferred for heavy drapery.
one roller is specified for every 100mm (4").

WAVE HEADING

Wave is a simple **S** folded heading system consisting of gliders spaced by a cord and a special pocketed header tape that is sewn onto a flat panel curtain. When assembled in the pole, the gliders/rollers on the cord are spaced at spacings shown below and this fixes the 'pitch' of the Wave. The flat panel curtain(s) are made in the conventional way with the pocketed Wave header tape sewn to the header. Hooks are fitted to header tape at a set spacing creating the Wave effect

WAVE FABRIC SUITABILITY

There is no standard test that will indicate whether a fabric is suitable for wave style. However, experience suggests it is normally suitable for:

✓ **Voiles • Lined cotton • Interlined Silk • Blackout lining**

The soft curves of Wave do not lend themselves to:

✗ **Stiff fabrics • Heavy embroidery • Irregular vertical stripes • Metallic threads**

CURTAIN WEIGHTS

Different types of fabric have widely differing weights. The type of curtain heading used (see below) will determine the fullness of the fabric used: this can be anything from 1.5 x the width of the pole to 3.0 x pole width.

The chart below assumes 100% fullness (2.0 x width of the pole) the weights are very approx and can vary for many reasons. Always check the expected and final total curtain weight with the curtain maker. Based on 1200mm (48") fabric width
